

CSE2201 Problem Set 1
Department of Computer Science
Faculty of Natural Sciences
University of Guyana
Due: March 12th, 2018 (Noon)
Semester II, 2017-2018

Description:

Now that you've learned the basics, time to strut your stuff while I sleep at home.

Problem Set Brief:

Creating a personal website is a great way for you to showcase your professional self to the world. To get some inspiration of what really good personal websites look like, follow this link:

<https://www.themuse.com/advice/the-35-best-personal-websites-weve-ever-seen>

For this assignment, you'll be creating your very own personal website. Your website must showcase at least five (5) pages or sections about you, namely:

- Profile
- Experience
- Work/Projects/Portfolio
- Gallery
- Contact

Other sections are up to you, but here are a few ideas:

- "Abilities / Proficiencies"
- "Personal Philosophy / Beliefs"
- "Favourite Quotes", etc.

You are free to integrate any relevant javascript enhancements that your wish, however, since you are only now learning HTML / CSS, the use of any website templates, front-end frameworks or WYSIWYG editors is prohibited.

Submission guidelines:

- When complete, you are required to host your personal website under a URL of your choice. **(FIGURE IT OUT YAHSELF!)**
- Share website URL in course FB group
- Create pdf with site URL & screenshots of website
- Compress all code & assest files to a zip archive called [usi]_personal_website to Moodle

Hints & Tips:

- Use the W3C HTML validator (<https://validator.w3.org/>) to validate your HTML; you'll get bonus points if it validates.
- Use the W3C CSS validator (http://www.css-validator.org/#validate_by_input) to validate your CSS; you'll get bonus points if it validates.
- This **MUST** be a personal website about yourself. Doing otherwise will result in heavy penalty.
